

Electricity with Good Environmental Choice eco-label in use

Hereby certify that the electricity consumed by

ODERLAND Webbhotell AB

during the period of 2018.03.01 - 2023.03.01

meets the Good Environmental Choice eco-label criteria set by
The Swedish Society for Nature Conservations (SSNC).

Göteborg den 26th november 2019

Henrik Hjelte, sales - Göteborg Energi AB

The Good Environmental Choice eco-label

The Good Environmental Choice (referred to as Bra Miljöval in Swedish) is one of SSNC's tools to encourage development of a sustainable energy system. Only electricity from renewable sources such as water, wind and biofuel is approved to be labelled with Good Environmental Choice.

Criteria for Good Environmental Choice electricity from Göteborg Energi

The demands include, but not limited to, water flow through hydropower plants in order not to endanger plants and animals in river environments. Wind turbines not to be located in areas worthy of protection and biofuel must come from forestry with high conservation value with considerations to its biological diversity. Göteborg Energi finances two funds for energy efficiency; one for water improvements and one for energy efficiency action plans. The funds provided by the SSNC.
